

Bactivate[®] **BioBoost⁺**

ACTIVATED HUMIC Liquid Concentrate

Bactivate *BioBoost Plus*[®] is a carbon-based liquid soil conditioner with a high level of activated and soluble humic that increases beneficial biological, geological and chemical activity in the soil.

Increased Biological Activity

- Serves as a food source for microbes
- Converts and releases nutrients
- Builds organic matter and humus
- Better seed germination
- Early root development
- Healthier Soils

Increased Geological Activity

- Reduces compaction
- Increases water holding capacity
- Mineralises soil particles
- Reduces soil loss
- Stronger plants
- Improves soil porosity

Increased Chemical Activity

- Unlocks nutrients
- Improves cation exchange capacity
- Converts raw fertiliser to plant food
- Increased fertiliser efficiency

BioBoost Plus is derived from 100% natural elements and is safe and non-toxic for use in all turf, horticulture and revegetation applications. It is not a fertiliser or a fertiliser replacement; it should be used as a soil conditioner in conjunction with a fertiliser program.

Why use an Activated Humic?

Humic substances are the major organic constituents of soil (humus), peat, and coal. They are produced by the decomposition of organic matter.

In their natural state, Humics are insoluble. This means they cannot disperse effectively through the soil profile.

*The proprietary processing technology in **BioBoost Plus** makes it highly active and soluble. BioBoost Plus humics are more pure and have the ideal humic-to-fulvic ratio to provide for maximum benefit.*

Whether it's sandy, compact or clay soils, BioBoost Plus provides benefits to all soil types.

Packaging

Available in 10L, 20L, 200L tubs or 1,000L shuttles.

Application Rates

- 2.5L per hectare
- Mix 10L tub thoroughly with minimum 500L water and apply via spray or fertigation. One 10L tub treats 4Ha.
