#### **GENERAL INFORMATION**

Aminogro® MAXi Calcium provides plants with a calcium chelate using L-form free amino acids and other simple organic sugars and acids. Nutrients are absorbed and shuttled around inside plants in the form of amino acids, simple sugars and acids so OrganoPLEX<sup>TM</sup> is an efficient way of delivering and mobilising calcium in plants. The organic carbon in Aminogro<sup>®</sup> MAXi Calcium also enhances microbial activity in soil which assists the plant accessing calcium and other nutrients when applied to the soil.

### COMPATIBILITY

Aminogro<sup>®</sup> MAXi Calcium can be mixed with most horticultural sprays. However, the performance of some sprays may be affected by high cation levels like calcium, potassium and phosphorus. It is best to apply these sprays separately or conduct a jar test to determine compatibility in the ratios they are to be used. Always check pesticide labels for compatibility with foliar fertilisers, or test the mixture on a small area before widespread application.
